2. FEATURES OF INTERIOR FINISHING SCREWS

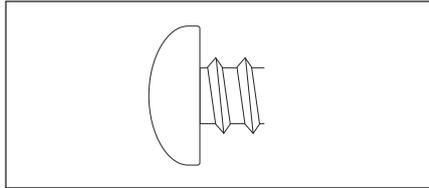

Head shapes

The oval head has a large bearing surface so that higher pull-over values can be obtained.

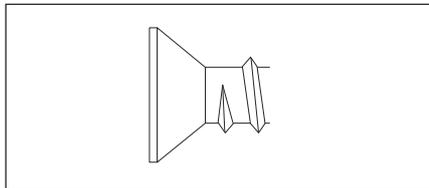

Oval head

The diameter of a pan head is somewhat smaller than that of an oval head. The pan head is used primarily for fastening metal to metal.

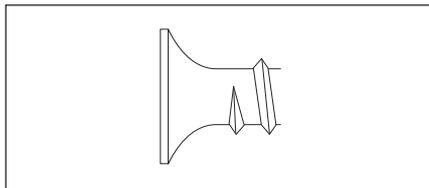

Pan head

The countersunk head is for fastenings where the screw head may not protrude above the surface.

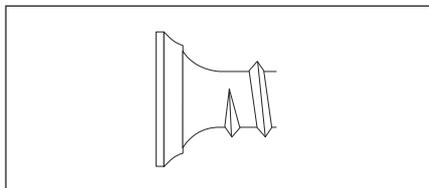

Countersunk head

The bugle head is used when fastening drywall panels (plasterboard, gypsum panels, etc.) to metal or timber framing.

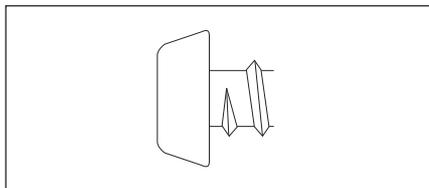

Bugle head

This is a special form of bugle head for fastening hard drywall panels (plasterboard, gypsum panels, etc.).

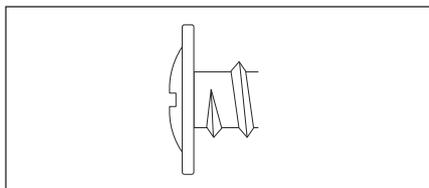

Double-countersunk head

This head is used for metal-to-metal fastenings, such as drywall tracks, metal framing members, etc.

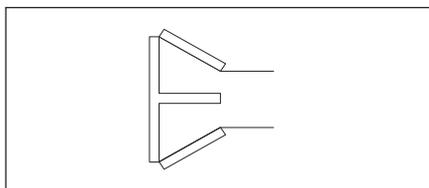

Framing head

The wafer head is used to fasten lightweight panels to metal framing members. The large bearing surface and the large diameter of the screw head ensure that the required pull-over values are obtained.

Wafer head

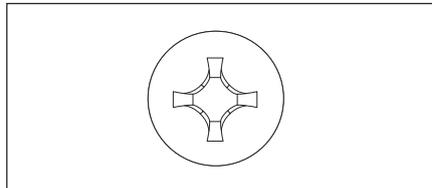

This head is for fastenings in timber and fiberboard panels. The screw head sinks itself into the material being fastened and also keys to prevent the screw from working loose.

Ribbed-countersunk head

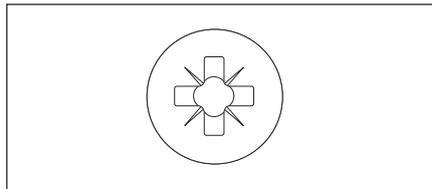

Screw drive / Recess type

Standard drive recesses for most drywall screws

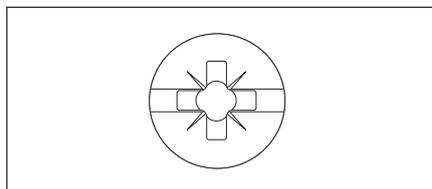

Phillips cross recess (PH)

Head drive recess for wood screws

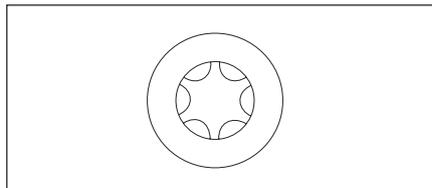

Pozidrive cross recess (PZ)

Pozidrive cross recess with an additional slot for a screwdriver; a head drive recess for wood screws

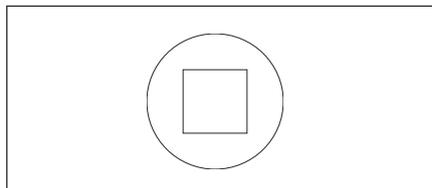

Combination of Pozidrive and cross recess

Head drive recess for tapping screws and wood screws

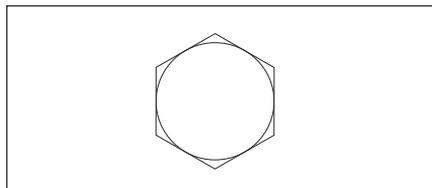

Torx (TX)

Square head for wood screws in HNA

Square (SQ)

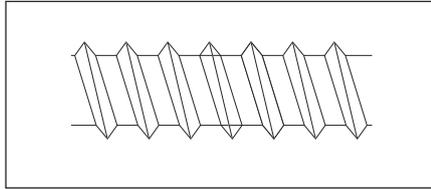

Hexagon head for wood screws

Hexagon head (HEX)

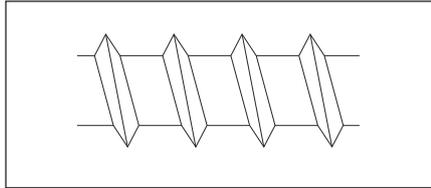

Types of threads

The most widely used thread shape for fastening drywall panels to metal framing metal substructure. This kind of thread enables high pull-out values to be obtained in thin metal. (Specified according to DIN 18 182, part 2)

fine thread
(single or double lead)

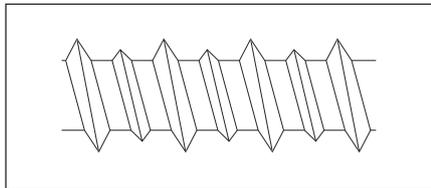

This kind of thread is used primarily for fastenings in timber (wood). Consequently, it has a taper point. This combination makes it possible for a low screw driving torque to be used and a good pull-out value to be obtained in timber (wood). (Specified according to DIN 7998)

Coarse thread

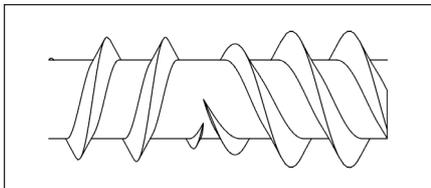

The HI-LO thread is suitable for avoiding problems, such as thread stripping when fastening in plastics. Further advantages are:

- High pull-out values
- Little tendency to cause splitting
- Optimal screw driving times
- High over-tightening torque

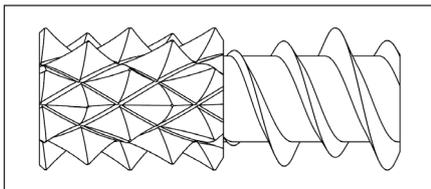

HI-LO thread
(double-lead thread with high and low turns)

This kind of thread is used primarily for fastening hardboards and fibreboards. The counterthread eliminates creation of gypsum bumps on the board's surface.

Counterthread

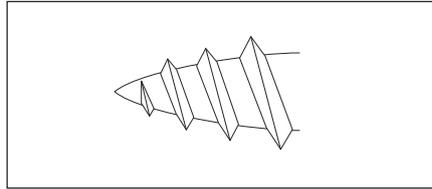

It removes excessive gypsum in order to eliminate bumps on the board's surface when the screw penetrates the board.

Pineapple with HI-LO thread

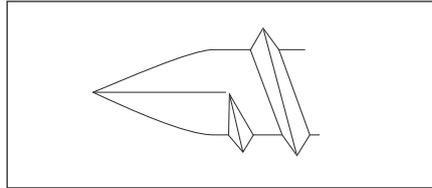

Types of screw points

The S point or tapered point is used primarily when fastening in plastic or lightgauge metal framing members up to max. 0.8 mm thickness.
Main field of application: Drywall fastening

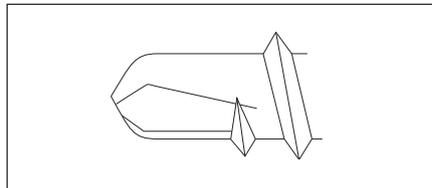

S point
(stitch)

This is a special point for wood-to-wood fastenings. The nail point makes it easier for the screw to be positioned with pinpoint accuracy. Also, it breaks wood fibers during penetration and thus hardly splits wood battens, laths, etc.

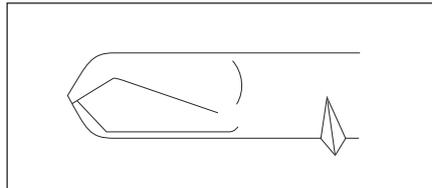

Nail point

The drill point drills the screw's own root (minor) diameter. Afterwards, the screw taps its own thread in the framing steel. In view of these features, this point is used primarily for steel thicker than 1 mm.

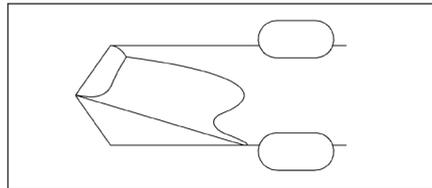

Drill point

This is a special point for screws for window installation. Its extended drill point ensures that thread tapping does not begin until the root hole (minor) diameter has been drilled in multi-layer frames / sections.

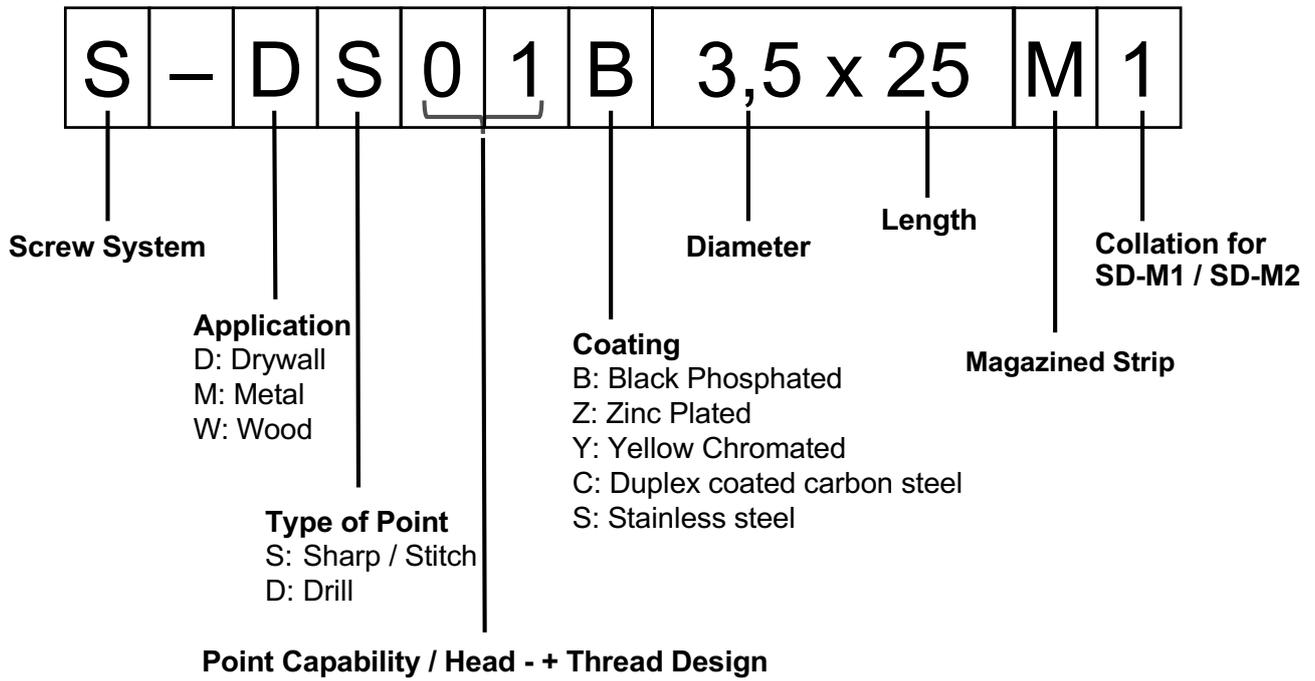

Pilot point

Wing tips on a screw enlarge the diameter of the hole in the board. The wings snap off when the screw comes up against a steel substructure.

Wing tip

HILTI DRYWALL SCREW NOMENCLATURE

3. CORROSION PROTECTION

With the objective to supply reliable and durable products, Hilti is constantly active in the development of methods of corrosion protection suitable for use with screws and fastening systems.

To evaluate the risk of corrosion, it is essential to assess the interaction between environmental conditions, material properties, material combinations and design characteristics.

To understand this interaction, you would need to consider the following influencing factors to atmospheric corrosion:

- **Humidity:** Humidity is a requirement for all atmospheric corrosion reactions.
- **Temperature:** The higher the temperature, the higher the rate of corrosive attack.
- **Salt:** Salt-laden air near the sea coast and the salt used for de-icing in winter accelerate corrosion.
- **Industrial pollution:** The high content of Sulphur dioxide accelerates corrosive reactions.
- **Galvanic (contact) corrosion:** This form of corrosion is caused by the contact of dissimilar metals (where one metal is less noble than the other).

Corrosion protection systems used by Hilti for screws

Hilti currently offers three different corrosion protection solutions that are adapted according to how the products are to be used and the applicable ambient conditions:

Phosphating and oiling gives screws a black appearance. Its manufacturing costs are relatively low and it ascertains good screw driving behavior. However, bear in mind that it is not considered as a corrosion protection coating. Corrosion protection of black phosphated screws is assured by a layer of oil.

Galvanic zinc plated carbon steel

The thickness of the zinc layer is between 4 and 15 µm, depending on the type of screw. The steel is protected from corrosion by sacrificial corrosion of the zinc, which is a base metal (i.e. not a noble metal). The zinc layer dissolves during the course of this protective procedure. The period of time until the steel begins to rust is thus defined by the rate at which the zinc corrodes.

Duplex-coated carbon steel

A duplex coating system is a corrosion protection system consisting of galvanizing (see above) in combination with other coatings. The galvanizing and the additional coating work together as a protective system. The coating protects the zinc layer from the effects of the atmosphere and chemical influences, thereby reducing the rate of corrosion. This increases the life of the screw, making its use possible in corrosive atmospheres.

A2 grade stainless steel

A2 stainless steel is an austenitic, acid-resistant CR-Ni steel with a low carbon content. Its high chromium content leads to formation of an oxide layer which provides a high level of corrosion protection. In situations where the oxide layer is destroyed it usually reforms if oxygen and moisture are present.

TEST PROCEDURES OF CORROSION PROTECTION

Salt spray test (DIN EN ISO 9227)

The salt spray test checks the effectiveness of protection against corrosion and quickly identifies defects, flaws, etc. in metal platings. Screws are placed in a test chamber with a temperature of about 35°C in which they are sprayed constantly with a salt solution (usually sodium chloride).

The test chamber has a volume of at least 400 liters and the walls are lined with a corrosion-resistant material to ensure that the test results are not influenced by other factors.

The duration of the test depends on the type and thickness of the coating on the screw and the coating's corrosion resistance, and may vary between 6 hours and more than 1000 hours.

Hilti requirements are tested according to DIN 50021-SS. Hilti screws in Europe and RoW have the following life expectancies results (in hours).

- | | |
|--|---------------|
| • B – Galvanized (phosphated) | ≥ 24 hours |
| • Z – Zinc chromated (galvanized carbon steel) | ≥ 48 hours |
| • Y – Yellow chromated | ≥ 48 hours |
| • C – Duplex coated carbon steel | ≥ 1 000 hours |
| • S – A2 grade stainless steel | ≥ 1 440 hours |

ENVIRONMENT CATEGORIES

Applications can be classified in various environment categories, taking the following main factors into account:

Indoor applications

Dry indoor environments

(heated or air-conditioned areas) without condensation, e.g. office buildings, schools

Indoor environments with temporary condensation

(unheated areas without pollutants), e.g. storage sheds

Outdoor applications

Outdoor, rural or urban environment with low pollution

Large distance (> 10 km) from the sea

Outdoor, rural or urban environment with moderate concentration of pollutants

and/or salt from sea water. Distance from the sea 1-10 km

Coastal areas

Distance from the sea < 1 km

Outdoor, areas with heavy industrial pollution

Close to plants < 1km (e.g. petrochemical, coal industry)

Close proximity to roadways treated with de-icing salts,

Distance from roadways < 10 m

Special applications

Special applications

Areas with special corrosive conditions, e.g. road tunnels with de-icing salt, indoor swimming pools, special applications in the chemical industry (exceptions possible).

Important notes

The ultimate decision on the required corrosion protection must be made by the customer. Hilti accepts no responsibility regarding the suitability of a product for a specific application, even if informed of the application conditions.

The tables are based on an average service life for typical applications. For metallic coatings, e.g. zinc layer systems, the end of lifetime is the point at which red rust is visible over a large fraction of the product and widespread structural deterioration can occur – the initial onset of rust may occur sooner. National or international codes, standards or regulations, customer and/or industry specific guidelines must be independently considered and evaluated.

These guidelines apply to atmospheric corrosion only. Special types of corrosion, such as crevice corrosion or hydrogen assisted cracking must be independently evaluated.

The tables published in this brochure describe only a general guideline for commonly accepted applications in typical atmospheric environments. Suitability for a specific application can be significantly affected by localized conditions, including but not limited to:

- Elevated temperatures and humidity
- High levels of airborne pollutants
- Direct contact with corrosive products, such as found in some types of chemically-treated wood, waste water, concrete additives, cleaning agents, etc.
- Direct contact to fresh / young concrete (less than 28 days old)
- Electrical current
- Contact with dissimilar metals
- Confined areas, e.g. crevices
- Physical damage or wear
- Extreme corrosion due to combined effects of different influencing factors
- Enrichment of pollutants on the product

ENVIRONMENT CATEGORIES

The following tables provides a general guideline for the most common screw fastening applications. The appropriate corrosion protection for each fastening material is shown based on the typical atmospheric environments (see notes).

Screws	S-DS B S-DD B	S-DS Z S-DD Z S-DS Y S-DD Y	S-DS C S-DD C S-WS C	S-DS S S-WS S

- = expected lifetime of fasteners made from this material is typically satisfactory in the specified environment based on the typically expected lifetime of a building. The assumed service life in ETA approvals for screw fasteners is 25 years.
- ²⁾ = a decrease in the expected lifetime of non-stainless fasteners in these atmospheres must be taken into account (≤ 25 years). Higher expected lifetime needs a specific assessment.
- = fasteners made from this material are not suitable in the specified environment. Exceptions need a specific assessment

4. SCREW PAGES

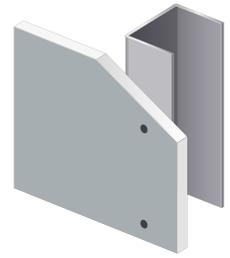

S-DS 01 B

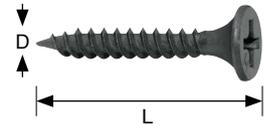

Application:

Drywall boards to metal substructure ≤ 0.88 mm

Technical data:

Screw design	Stitch point - Fine thread - Bugle head
Screw drive / recess type	PH2
Material	Carbon steel
Coating	Phosphated
Penetration depth	Min. 10mm
Recommended rotation speed	4500 - 6000 rpm
Pull-out load	≥ 450 N
Standard	EN 14566
Environmental conditions	

Single screws

Tensile strength and shear strength values of single screws can be applied to collated screws too.

Collated screws for SMD 57

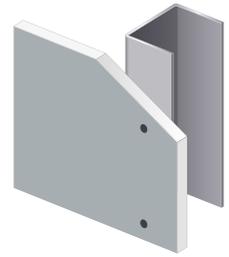

Description	Length L [mm]	Diameter D [mm]	Drilling capacity (DC)	Min. failure torque [Nm]	Pkg. quantity	Item no.
S-DS 01 Y 3,5X25 M	25	3.5	0.60 - 0.88	≥ 2.8	1000	2007784
S-DS 01 Y 3,5X35 M	35	3.5	0.60 - 0.88	≥ 2.8	1000	2007785
S-DS 01 Y 3,5X41 M	41	3.5	0.60 - 0.88	≥ 2.8	1000	2007786
S-DS 01 Y 3,5X45 M	45	3.5	0.60 - 0.88	≥ 2.8	1000	2007787
S-DS 01 Y 3,5X55 M	55	3.5	0.60 - 0.88	≥ 2.8	1000	2031582

S-DD 01 B

Application:

Drywall boards to metal substructure $\geq 0.75 \text{ mm} \leq 2.25 \text{ mm}$

Hard boards to metal substructure $\geq 0.75 \text{ mm} \leq 2.25 \text{ mm}$

Technical data:

Screw design	Drill point - Fine thread - Bugle head
Screw drive / recess type	PH2
Material	Carbon steel
Coating	Phosphated
Penetration depth	Min. 10mm
Recommended rotation speed	2500 - 5000 rpm
Pull-out load	$\geq 450 \text{ N}$
Standard	EN 14566
Environmental conditions	

Single screws

Tensile strength and shear strength values of single screws can be applied to collated screws too.

S-DS 03 S

Application:
Drywall boards to wood substructure
Lost formwork for Promat fire boards

Technical data:

Screw design	Stitch point - Coarse thread - Bugle head
Screw drive / recess type	PH2
Material	A2 stainless steel
Coating	No coating
Penetration depth	Min. 20mm
Recommended rotation speed	4500 - 6000 rpm
Pul-out load	≥ 450 N
Standard	EN 14566
Environmental conditions	  

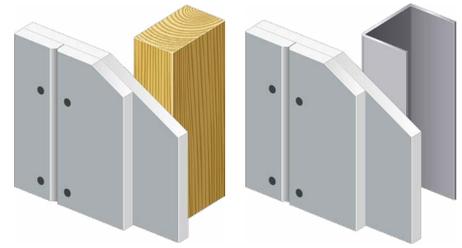

Collated screws for SMD 57

Description	Length L [mm]	Diameter D [mm]	Drilling capacity (DC)	Min. failure torque [Nm]	Pkg. quantity	Tensile strength [kN]	Shear strength [kN]	Item no.
S-DS 03 S 5,0x50 M A2	50	5.0	-	-	1000	6.6	4.1	388454

S-DS 04 B

Application:
Drywall boards to drywall boards

Technical data:

Screw design	Stitch point - Coarse thread - Bugle head
Screw drive / recess type	PH2
Material	Carbon steel
Coating	Phosphated
Penetration depth	Min. 10mm
Recommended rotation speed	4500 - 6000 rpm
Pull-out load	≥ 450 N
Standard	EN 14566
Environmental conditions	

Single screws

S-DS 07 Z

Application:

Metal framing - overall thickness of fastened materials ≤ 1.20 mm

Technical data:

Screw design	Stitch point - Fine thread - Countersunk head
Screw drive / recess type	PH2
Material	Carbon steel
Coating	Zinc plated
Penetration depth	Min. 10mm
Recommended rotation speed	1800 - 2500 rpm
Pull-out load	≥ 450 N
Standard	EN 14566
Environmental conditions	

Single screws

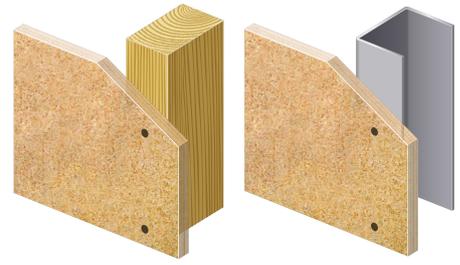

Description	Length L [mm]	Diameter D [mm]	Drilling capacity (DC)	Min. failure torque [Nm]	Pkg. quantity	Tensile strength [kN]	Shear strength [kN]	Item no.
S-DS 07 Z 4,0x14	14	4.0	0.50 - 1.20	≥ 5.9	1000	-	-	273769

S-DS 10 Z

Application:

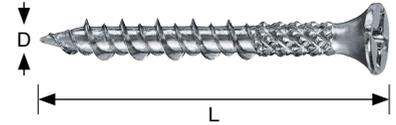

Fibre boards to metal substructure ≤ 0.88 mm

Fibre boards to wood substructure

Technical data:

Screw design	Stitch point - Hi/Lo thread - Bugle head
Screw drive / recess type	PH2
Material	Carbon steel
Coating	Zinc plated
Penetration depth, metal	Min. 10mm
Penetration depth, wood	Min. 20mm
Recommended rotation speed	4500 - 6000 rpm
Pull-out load, metal	≥ 300 N
Pull-out load, wood	≥ 450 N
Standard	EN 14566
Environmental conditions	

Single screws

Tensile strength and shear strength values of single screws can be applied to collated screws too.

Description	Length L [mm]	Diameter D [mm]	Drilling capacity (DC)	Min. failure torque [Nm]	Pkg. quantity	Tensile strength [kN]	Shear strength [kN]	Item no.

Collated screws for SMD 57

Description	Length L [mm]	Diameter D [mm]	Drilling capacity (DC)	Min. failure torque [Nm]	Pkg. quantity	Item no.
S-WS 08 C 4,2x41	41	4.2	-	≥ 3.5	1000	400757
S-WS 08 C 4,2x51	51	4.2	-	≥ 3.5	1000	400758

S-WS 08 S

Application:
Fastening exterior wood decks to wood substructure

Technical data:

Screw design	Stitch point - Coarse thread - Countersunk head
Screw drive / recess type	PH2
Material	A2 stainless steel
Coating	Zincotech Au
Penetration depth	Min. 20mm
Recommended rotation speed	2000 - 3000 rpm
Pull-out load	≥ 450 N
Standard	EN 14566
Environmental conditions	  

Collated screws for SMD 57

Description	Length [mm]	Diameter [mm]	Drilling capacity (DC)	Min. failure torque [Nm]	Pkg. quantity	Tensile strength [kN]	Shear strength [kN]	Item no.
S-WS 08 S 4,2x41 M	41	4.2	-	≥ 3.5	1000	-	-	386072
S-WS 08 S 4,2x51 M	51	4.2	-	≥ 3.5	1000	-	-	386073

S-WS 11 Z

Application:

Universal screw - fastening wood or drywall boards to wood or metal substructure

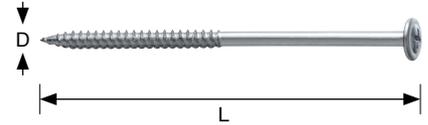

Fastening reinforcing metal sheets on top of drywall boards to metal substructure

Fastening reinforcing metal sheets on top of drywall boards to wood substructure

Technical data:

Screw design	Stitch point - Fine thread - Wafer head
Screw drive / recess type	PH2
Material	Carbon steel
Coating	Zinc plated
Penetration depth	Min. 20mm
Recommended rotation speed	2000 - 3000 rpm
Pull-out load	≥ 450 N
Standard	EN 14566
Environmental conditions	

Single screws

Description	Length L [mm]	Diameter D [mm]	Drilling capacity (DC)	Min. failure torque [Nm]	Pkg. quantity	Tensile strength [kN]	Shear strength [kN]	Item no.
S-WS 11 Z 4,2x45	45	4.2	-	≥ 3.5	500	-	-	2107698

S-WS 11 Z 4,8x100	100	4.8	-	≥ 5.6	100	-	-	400744

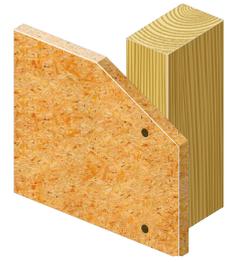

S-WS 11 Y

Application:

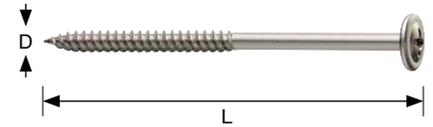

Universal screw - fastening wood or drywall boards to wood or metal substructure

Fastening reinforcing metal sheets on top of drywall boards to metal substructure

Fastening reinforcing metal sheets on top of drywall boards to wood substructure

**Technical data:**

Screw design	Stitch point - Fine thread - Wafer head
Screw drive / recess type	PH2
Material	Carbon steel
Coating	Yellow chromated
Penetration depth	Min. 20mm
Recommended rotation speed	2000 - 3000 rpm
Pull-out load	≥ 450 N
Standard	EN 14566
Environmental conditions	

**Single screws**

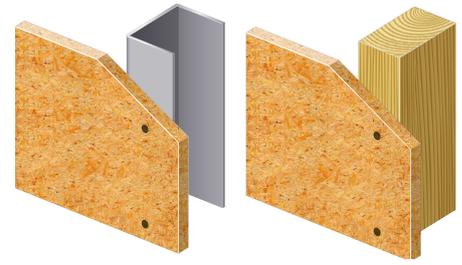

Description	Length L [mm]	Diameter D [mm]	Drilling capacity (DC)	Min. failure torque [Nm]	Pkg. quantity	Tensile strength [kN]	Shear strength [kN]	Item no.

S-WS 12 Z

Application:

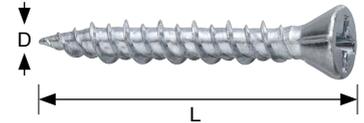

Wood boards to wood substructure

Wood boards to metal substructure ≤ 0.88 mm

Technical data:

Screw design	Stitch point - Hi/Lo thread - Countersunk head
Screw drive / recess type	PH2
Material	Carbon steel
Coating	Zinc plated
Penetration depth, metal	Min. 10mm
Penetration depth, wood	Min. 20mm
Recommended rotation speed	2500 - 5000 rpm
Pull-out load, metal	≥ 300 N
Pull-out load, wood	≥ 450 N
Standard	EN 14566
Environmental conditions	

Single screws

Tensile strength and shear strength values of single screws can be applied to collated screws too.
